

# POLICY Quality Safety Environment

GENERAL INDUSTRIES is a team of experts, at the heart of the ecosystem, with the ambition to be recognized as a benchmark player in recycling.

The creation of a cutting-edge industrial infrastructure for plastic waste, 1.08 RECYCLING, is proof of our commitment to responsible and viable management of strategic waste. Our activity, the production of recycled PS, PP and ABS, makes it possible to reduce CO2 emissions by 45 to 63% and the consumption of fossil resources by 65 to 69% compared to virgin material from petrochemicals.

We are almost 50 employees committed to building and developing a new quality standard that combines environmental, economic and human issues.

We ensure the recovery of waste and declassified from factories: post-consumer and post-industrial plastics, regenerated and declassified plastics, resins and rubbers.

The latest installations have made it possible to diversify the incoming materials and process brominated plastics.

## OUR COMMITMENTS RESULT IN SIMPLE AND MEASURABLE OBJECTIVES:

Find tailor-made solutions, with dedicated and available contacts.

Produce regenerated plastic in compliance with our customers' specifications with the aim of replacing virgin material,

Produce in compliance with current legislation and regulations,

Ensure the traceability and conformity of our products, with rigor and transparency,

Measure and analyze our performance and monitor corrective and preventive actions in order to improve the quality of our products, our productivity, our techniques and processes,

Promote professional development and raise the ecological awareness of teams,

Fight against the depletion of natural resources, in particular water consumption, global warming and all other forms of pollution,

Produce responsibly while being vigilant in protecting the environment and everyone's health, while reducing the carbon footprint of our activities.

Through these ambitions, GENERAL INDUSTRIES and 1.08 RECYCLAGE must maintain their ISO 9001 and ISO 14001 certifications.
